

# DEEPAK PRAJAPATI

Analytics Engineer

+33 745-330-940   Montpellier, France   deepak.byte07@gmail.com  

## ABOUT ME

Data & analytics engineer with an MSc in Big Data & AI and 4+ years across data and analytics. At TravelJuice I build the analytics stack in Big Query: funnel models, GA4/GTM tracking, and the dashboards marketing and product rely on, and I build LLM applications on the side (agentic RAG, evaluation-driven). Looking for full-time roles as a Data Scientist, AI / ML Engineer, or Analytics Engineer, working end to end across data pipelines, modelling, and production AI.

## EDUCATION

MONTPELLIER BUSINESS SCHOOL

Big Data & AI

2025-2026

IIT ROPAR – INDIA

Major in AI

2024-2025

MAHARAJA SAYAJIROA  
UNIVERSITY – INDIA

Bachelors of Commerce  
2017-2020

## SKILLS

- ETL & Workflow Automation (n8n)
- Dashboarding (Power BI)
- KPI Design & Reporting
- Data to decision articulation

## CERTIFICATION'S

- [Microsoft PL-300](#)
- [7 Tools of QC](#)
- [Six Sigma Yellow Belt](#)
- [Data Analytics](#)

## LANGUAGES

- English – C1
- Hindi – C1
- French – B1

## WORK EXPERIENCES

Data & Analytics – TravelJuice

2026–Present

- Built the analytics layer for the company's funnel rebuild in Big Query – mart tables spanning search, conversion funnel, checkout, product performance, and customer lifecycle – and surfaced them through Looker Studio dashboards wired to near-real-time streaming tables, now the marketing and product reporting used across the team.
- Rebuilt GA4/GTM tracking across the editorial and hotels sites (cleanly isolated from the live flights setup, with a GTM runbook for safe shipping) and closed an 82% Meta Ads-vs-GA4 conversion gap by tracing it to consent-gated tracking and rolling out Consent Mode V2 with server-side tagging, bringing attribution back in line.

Qc Data Analyst – Numerator

2023–2024

- Built 4+ executive dashboards and a leaner reporting pipeline that cut turnaround time by ~30%, so leaders could act on results the same week instead of the next quarter.
- Led 10-12 analysts through 800+ QC blocks/week at 95%+ SLA; standardised the QC methodology and ran 10+ cross-trainings, lifting audit scores by 25%, cutting process deviation by 20%, and closing accuracy gaps across 3 web teams (+35%).

Data Associate – Numerator

2021–2023

- Ran real-time productivity tracking for 80+ associates and built backlog playbooks that cut peak clearance time by 40%; onboarded new retailers through 15+ trainings and reused validated data to remove repetitive work.

Market Researcher – ARSS

2018–2020

- Cleaned and segmented multi-source data in Excel (lookups, pivots, conditional logic) to raise reporting accuracy and cut turnaround by 25%, then packaged it into summaries that fed product and go-to-market decisions.

## PROJECTS

Agentic RAG Travel Assistant

2026

- Airbnb travel assistant built on an agentic RAG pipeline (Chroma DB, Llama 3.3 via Groq, Streamlit); used RAGAS to measure and tune retrieval, taking the faithfulness score from 0.60 to 0.92. Deployed and live.

HR Resume Sorting Workflow

2025

- AI-powered CV screening pipeline: automated intake, parsing, JD scoring; reduced screening time 70%+.

Stock Market Prediction – Using ML

2025

- Built forecasting price trends and surfacing actionable, decision-ready insights using RAG, Matplotlib & Pytorch.
